Baxt CosMedical

Q: How does Baxt CosMedical help patients achieve clear skin?

A: Baxt CosMedical is a renowned facility for providing state-of-the-art care for Dermatology and Plastic Surgery patients throughout the tri-state area for over 35 years. By combining these two aesthetic specialties under one roof, they let the experts do what they are best at – plastic surgeons perform surgery, and dermatologists practice dermatology. They have only board certified physicians. Their outstanding physical facility houses a vast array of advanced technology equipment and the first certified ambulatory office-based Surgi-Center in the state of New Jersey. They pride themselves on being at the forefront of the advances in aesthetic medicine.

Dr. Rebecca Baxt and Dr. Saida Baxt, both board certified Dermatologists, are experts in managing acne and rosacea. Adult acne and rosacea affect millions of women in their 20's-50's and can be debilitating if not treated aggressively. They use both traditional therapies as well as

many laser and light treatments to give everyone clear skin. They have available Smoothbeam Laser, Isolaz and Photodynamic therapy for acne, as well as Vbeam laser and Photorejuvenation for rosacea. "We treat patients of all ages, everyone deserves to have clear skin, and acne is not just for kids," says Dr. Rebecca Baxt.

Drs. Baxt are also well known for honest consultations and natural results with Botox and Fillers, and were some of the first doctors to use Voluma for mid face rejuvenation. "Our patients look just like themselves, only younger, happy and well rested," says Dr. Rebecca Baxt. "No one should or would know that they had any injections."

Drs. Baxt also perform Fraxel Laser Resurfacing, Laser Hair Removal, Leg Vein Injections and Chemical Peels, as well as mole checks and skin cancer screenings and treatments. The doctors at Baxt Cosmedical see both adults and children and have same day appointments available.
